

# The Future of **Data-Centric AI**

## Snorkel Flow **workshop**

**August 2, 2022, 9 AM – 11 AM Pacific Time**

Join this hands-on workshop to learn how to build AI applications rapidly using a data-centric AI workflow, weak supervision, and programmatic labeling. In this two hour workshop, experts from Snorkel will introduce you to Snorkel Flow and walk you through an end-to-end process of data labeling, model training and refinement.

This workshop is hosted **virtually** and is **free** to attend.

### **Who should attend:**

Data scientists, machine learning and software engineers within **Global 2000 enterprises and government organizations** that are:

- looking to automate labeling and reduce the time-to-value for ML-based applications
- working with private data that cannot be shipped to 3rd party vendors
- working with complex data that requires knowledge from subject matter experts to be labeled
- seeking to use data as a differentiator

### **What will you experience?**

- Get hands-on access to Snorkel Flow platform
- Learn how programmatic labeling and weak supervision work
- Generate large labeled datasets quickly by writing labeling functions
- Train ML models in-platform for text and document classification problems
- Iterate on training data with instant error analysis and model-guided feedback
- Try novel techniques such as data-centric UI, boosted active learning, search-based and embeddings-based programmatic labeling
- 7-days free access to a Snorkel Flow Test Drive instance after the live workshop

### **How to apply for a spot:**

- Register on [future.snorkel.ai](https://future.snorkel.ai) and select the “workshop” option.
- Once your spot is confirmed you will receive an email with details.
- Questions? Email [events@snorkel.ai](mailto:events@snorkel.ai).
